

# REGLAZING

8mm  
Twinwall

For many existing greenhouses the metal skeleton is in good shape, but the glazing (or skin) of the building needs to be updated. Reglazing is a great way to make an old building look new again for a fraction of the cost of a new building. Even in cases where an old building has some wear and tear (or rusting), reglazing allows us to make the structure "like new" again.

Before

After

8mm  
Twinwall

WISCONSIN  
GREENHOUSE  
COMPANY

### **STANDARD 10 (8mm) Twinwall**

.307 lbs Ft<sup>2</sup> | .57 U-Value | 1.75 R-Value | 81% Visual Light Transmission  
.82 Solar Heat Gain | 55" Bending Radius

**Installer Note:** Our installers think this is a good product and comparable to most twinwalls on the market.

### **SUPERIOR 12 (8mm) Twinwall**

.307 lbs Ft<sup>2</sup> | .57 U-Value | 1.75 R-Value | 81% Visual Light Transmission | .82 Solar Heat Gain  
55" Bending Radius | 10 Year Warranty + 5 Years Pro-rated (10% or less yellowing allowance)  
15 Year No-Breakage Warranty\*

**Installer Note:** Our installers think this is an upgraded product vs the standard. It cuts smoother and seems a bit stronger when pushed from a snow or blunt force.

### **EVERLAST 15 (8mm) Twinwall**

.348 lbs Ft<sup>2</sup> | .57 U-Value | 1.75 R-Value | 81% Visual Light Transmission | .82 Solar Heat Gain  
55" Bending Radius | 15 Year Warranty + 5 Years Pro-rated (5% or less yellowing allowance)  
20 Year No-Breakage Warranty\*

**Installer Note:** Our installers think this is the best in its field. It cuts smooth and equally strong to the Superior glazing. But most importantly, it stays clearer (against yellowing) almost twice as long as other twinwalls. The clarity is most notable after 8-10 years.
